We only offer OEM-approved Alloy Rims.

These rims are designed to meet the manufacturer's safety, fitment, and performance standards, ensuring proper handling, brake clearance, and overall vehicle integrity.

Why do we recommend Alloy wheels over Steel wheels?

Better Aesthetics

Sleeker, more stylish appearance

Lighter Weight

Alloy rims are lighter than steel, improving fuel efficiency, handling, and suspension performance.

Corrosion Resistance

Unlike steel wheels, Alloy wheels come with protective finishes that resist corrosion in snowy, salty conditions.

Better Resale Value

Holds a higher value, which can help with resale or trade-ins.

Enhanced Performance & Efficiency

Alloy rims provide better ventilation, helping to keep brakes cooler—this can extend brake life and reduce the risk of warped rotors.

Online Manufacturer Rebates

Up to \$100 rebate for Michelin Tires, \$40 rebate for Uniroyal Tires
